Journal of Electrostatics, 29 (1993) 299–337
Elsevier

Subject Index Volumes 1–29

AC fields,
  Conductance separation, 14 (175)
Absorption and resorption currents, 16 (89)
Absorption current, 19 (33, 287)
Accident reporting/investigation, 27 (179, 180)
Activation energy, 9 (49)
  Calculation of, 3 (4, 19–22, 72, 114–116, 128, 157–161, 230, 245, 272, 285)
  Cellulose acetate, 9 (315)
  Plot, 3 (34, 76, 85, 92, 128, 158, 184, 211).
Activation enthalpy, 3 (3, 84)
Activation volume, 3 (84)
Activator, 3 (7, 15, 289)
Additive, 12 (345)
Additives, effect of, 3 (143, 150–154)
Adhesion, 22 (289)
Adventitious electrets, 1 (101)
Aerodynamic considerations in electrostatic precipitation, 8 (325)
Aerols,
  Charging, migration and electrohydrodynamic transport of —, 5 (225)
  Ion chamber response to —, 5 (391)
Aeroplanes, 27 (107, 108)
Aerosol particles
  Electrostatic suspension of — during chemical reactions, 10 (223)
Aerosols, 25 (145, 165, 185), 26 (81)
Age effects, 12 (621)
Age, determination of, 3 (258)
Aggregation of dipoles, 3 (5, 125–131)
Aging, physical, 3 (171–179)
Agitating
  Electrostatic charging of poorly conductive liquid systems (suspensions, emulsions and solutions) by —, 10 (89)
Agitation, 27 (60)
Agricultural systems, 16 (209)
Air filters, 21 (81)
Air gaps, 24 (33)
Air ions, 20 (205)
Aircraft fuelling, 27 (76–78)
  Discharger for, 9 (59)
Alkali halides, ionic thermocurrent study of impurity-vacancy dipoles in, 1 (231)
Alkali halides, 29 (167)
Alkylamines, tertiary,
  — as sensitizers for (+) charge injection from selenium into n-dodecane and as ionic (+) charge carriers in n-dodecane, 7 (293)
Alkylbenzene, 12 (601)
Alpha irradiation, 3 (259)
Alpha relaxation, 3 (85, 150, 157, 168)
Amorphous semiconductors, high-resistance, high-field polarization, photopolarization and photoelectret properties of, 1 (217)
Analysis of the charging and discharging processes of a dielectric with space charges by analog modelling on a field analyzer, 8 (49)
Analysis of
  Capacitance transients, 3 (105–112, 241–249, 252–255)
  Charge decay, 3 (187–193)
  DLTS, 3 (34–35)
Analytical method, 18 (219)
Analytical solutions, 18 (23)
Anemometer,
  Electrogasdynamic spectral —, 5 (101)
Anemometers, 25 (245)
Annealing, 3 (5, 18, 21, 128–129, 177, 279)
Anomalous current, 19 (287)
Anomalous fading, 3 (263–264, 275–279, 282–284)
Anomalous photodepolarization, 3 (195–202)
Anthracen crystal, 12 (27)
Anti-static treatment, 9 (385)
Anti-static
  Additives, 27 (5, 39, 41, 48, 65, 67, 78, 157)
  Bags, 27 (90)
  Floors, 27 (90, 115)

Publisher's note

Submission of manuscripts by diskette

We are pleased to announce that authors of this journal will from now on have the option of submitting accepted, final manuscripts in machine-readable form. We can handle most word-processing systems and disk formats. Instructions for preparation can be found on the information pages at the back of this issue.

Please note that the usual preparation method as hardcopy alone will always be possible. You may rest assured that the final quality of the printed article will remain the same whether it originates from a compuscript submission or submission as hardcopy.

We expect that the production times—presently around four to five months—can be further reduced when this new process has been fully implemented. We hope that many of our regular authors will take up this opportunity of submitting their manuscripts in electronic form.

The Publisher

NOTES FOR ELECTRONIC TEXT PREPARATION FOR ACCEPTED FINAL MANUSCRIPTS

1. General

The word-processed text should be in single column format. Keep the layout of the text as simple as possible; in particular, do not use the word-processor's options to justify the text or to hyphenate the words.

2. Text preparation

The electronic text should be prepared in a way very similar to that of conventional manuscripts (see also Guide for Authors). The list of references, tables and figure captions should be compiled separately from the main text. Do *not* reserve space for the figures and tables in the text; instead, indicate their approximate locations, either directly in the electronic text or on the manuscript.

3. Submission

The final text should be submitted both in manuscript form and on diskette. Use standard 3.5″ or 5.25″ diskettes for this purpose. Both double density (DD) and high density (HD) diskettes are acceptable. Ensure, however, that the diskettes are formatted according to their capacity (HD or DD) before copying the files onto them.

Storage of the main text, list of references, tables and figure captions in separate text files with clearly identifiable file names (for example, with extensions .TXT, .REF, .TBL, .FIG) is required.

The format of the files depends on the wordprocessor used. Texts made with DEC WPS PLUS, DisplayWrite, First Choice, IBM Writing Assistant, Microsoft Word, Multimate, PFS:Write, Professional Writer, Samna Word, Sprint, Total Word, Volkswriter, Wang PC, WordMARC, WordPerfect, Wordstar, or files supplied in DCA/RFT format can be readily processed. In all other cases the preferred text format is ASCII.

Essential is that the name *and* the version of the wordprocessing program and the type of computer on which the text was prepared is clearly indicated on the diskette label or the accompanying checklist.

Authors are encouraged to ensure that **the disk version and the hardcopy must be identical**. Discrepancies can lead to proofs of the wrong version being made.

Illustrative material (original figures or high-quality glossy prints, or photographs showing sharp contrast) should be included separately.

ELECTRONIC TEXT CHECKLIST

Please complete this list where appropriate and include it with the diskette.

[1] In view of the further text processing on a MS-DOS compatible system submission of text files on MS-DOS formatted diskettes is recommended.
[2] Files should be submitted in DX format (option "CV" from the DEC-WPS Document Processing Menu).
[3] Files created with DisplayWrite 4 should be submitted in DCA/RFT format by means of the DisplayWrite "Convert Documents" utility.
[4] Submission of the text files in ASCII format is strongly recommended.

CATALOGUE 1993 ON CD-ROM

Elsevier Science Publishers - the world's largest scientific publisher - presents for the first time details of all its publications on CD-ROM

ADVANTAGES

- ➢ Easy to use.
- ➢ Get more comprehensive information than ever before.
- ➢ Make fast and effective searches.
- ➢ Find what you want even with incomplete information.
- ➢ Compile special lists of products without typing.
- ➢ Improve your control of scientific product information.
- ➢ Enhance service to clients.

PRODUCT DESCRIPTION

The CD-ROM contains descriptions of all Elsevier products.

- ➢ All the journals, with complete information about journal editors and editorial boards
- ➢ Listings of recently published papers for many journals
- ➢ Complete descriptions and contents lists of book titles
- ➢ Independent reviews of published books
- ➢ Forthcoming title information
- ➢ Book series
- ➢ All other products, e.g. software, CDs, dictionaries, wallcharts.

In addition, the CD-ROM features easy-to-use search tools, making the information accessible and useful. For example, searches can be made by subject area, by year of publication, by author/editor or title and by "free text" search.

Full book and journal information can be printed to initiate your order.

If you do not find what you need, or wish to know more about Elsevier's publishing programme, the CD-ROM can supply you with the name, address and fax number of the correct person to contact.

AUDIENCE

Librarians, booksellers, researchers, agents and information specialists.

SYSTEM REQUIREMENTS

The CD-ROM has been designed to run under Microsoft® Windows™ 3.0, on IBM PC-ATs and compatibles. The CD-ROM is Microsoft® Windows™ 3.1 compatible.

ELSEVIER
SCIENCE PUBLISHERS

The minimum requirements are:

- ➢ IBM or IBM-compatible PC with a 80286 or higher processor
- ➢ 2 MB or more RAM
- ➢ MS-DOS® 3.3 or higher installed
- ➢ Microsoft® Windows™ 3.0 (or 3.1) installed
- ➢ Microsoft® Windows™ compatible mouse or other pointing device
- ➢ VGA graphics adapter (colour or monochrome)
- ➢ Hard disk with at least 2 MB free disk space
- ➢ CD-ROM drive which is accessible from Microsoft® Windows™
- ➢ For faster operation a 80386SX or higher processor is recommended, as well as a fast CD-ROM drive (access time less than 0.4 seconds).

The CD-ROM can be installed in a local area network.

SUBMISSION OF PAPERS

Papers should be submitted to the Editor or to one of the Regional Editors (Papers in French to Prof. Coelho, papers in German to Dr. Krämer).

Submission of a manuscript implies that it is not under consideration for publication elsewhere and further that, with the exception of review papers, original work not previously published is being presented.

Three copies of the *manuscript* should be submitted in double-spaced typing on pages of uniform size with a wide margin on the left. The top copy should bear the name and full postal address of the person to whom proofs are to be sent. A summary of 100–200 words is required.

References should be numbered consecutively throughout the text and collected together in a reference list at the end of the paper. Journal titles should be abbreviated. The abbreviated title should be followed by volume number, year (in parentheses), and page number.

All *illustrations* and tables should be numbered consecutively and separately throughout the paper.

Line drawings should be in a form suitable for reproduction, drawn in Indian ink on drawing paper. They should preferably all require the same degree of reduction, and should be submitted on paper of the same size as, or smaller than, the main text, to prevent damage in transit. Photographs should be submitted as clear black-and-white prints on glossy paper. Each illustration must be clearly numbered.

Legends to the illustrations must be submitted in a separate list.

The principal *language* of the Journal is English, but papers in French and German will be published.

Authors will receive *galley* proofs, which they are requested to correct and return as soon as possible. No new material may be inserted in the text at the time of proofreading.

A total of 50 *reprints* to each paper will be supplied free of charge to the author(s). Additional copies can be ordered at prices shown on the reprint order form which accompanies the galley proofs.

Submission of electronic text
In order to publish the paper as quickly as possible after acceptance, authors are encouraged to submit the final text also on a 3.5″ or 5.25″ diskette. Both double density (DD) and high density (HD) diskettes are acceptable. The diskette may be formatted with either MS-DOS/PC-DOS or with Macintosh OR. See the Notes for Electronic Text Preparation at the back of this issue for further information. The final manuscript may contain parts (e.g. formulae, complex tables) or last-minute corrections which are not included in the electronic text on the diskette; however, this should be clearly marked in an additional hardcopy of the manuscript. Authors are encouraged to ensure that apart from any such small last-minute corrections, **the disk version and the hardcopy must be identical.** Discrepancies can lead to proofs of the wrong version being made.

This volume is printed on acid-free paper.

No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior written permission of the publisher, Elsevier Science Publishers B.V. P.O. Box 1991, 1000 BZ Amsterdam. The Netherlands.
Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. The transfer will ensure the widest possible dissemination of information.
Submission of an article for publication entails the author(s) irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S. 351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.
Special regulations for readers in the U.S.A.-This journal has been registered with the Copyright Clearance Center. Inc. Consent is given for copying of articles for personal or internal use or for the personal use of specific clients. The consent is given on the condition that the copier pay through the Center the per-copy fee for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. The per-copy fee is stated in the code-line at the bottom of the first page of each article. The appropriate fee, together with a copy of the first page of the article, should be forwarded to the Copyright Clearance Center, Inc. 27 Congress Street, Salem, MA0 1970, U.S.A. If no code-line appears, broad consent to copy has not been given and permission to copy must be obtained directly from the author(s). All articles published prior to 1980 may be copied for a per-copy fee of US $2.25 also payable through the Center. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.
No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein.

PRINTED IN THE NETHERLANDS

JOURNAL OF ELECTROSTATICS

Articles are abstracted/indexed in:

Cambridge Scientific Abstracts, Current Contents, Engineering Index, HSL Abstracts, INSPEC, Physics Index, Physikalische Berichte, Science Citation Index.

Forthcoming papers

Current distributions of negative d.c. corona on the plane for point-plane gap in nitrogen rich condition
A. Boudjella, M. Yumoto and T. Sakai
Dual mechanism for metal-polymer contact electrification
L.-H. Lee
Space-charge dispersive transport in corona-charged dielectrics
V.I. Arkhipov, D.V. Khramchenkov, A.I. Rudenko and G.M. Sessler
A self contained floating spherical probe for the measurement of volume electric fields
M. Horenstein, M. Codrescu, J. Garvey, J. Johnson, M. Greenstein and C. Tan

Announcement

Authors may now accompany their manuscripts with texts in electronic form

Please see the notes on the inside back cover and the guide at the back of the issue. Authors are requested to submit a completed checklist with each diskette. Additional copies of the guide and the checklist are available from the publisher.

SUBSCRIPTION INFORMATION

Subscription price: Dfl.630 plus Dfl. 66 (p.p.h.) = Dfl. 696. This covers volumes 30 and 31. Please send your order to: Elsevier Science Publishers B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands, Tel. 5803 911, Telex 18582 ESPA NL. Claims for missing issues will be honoured, free of charge, within three months after publication date of the issue. All back volumes are available at Dfl. 270 plus Dfl. 18 (p.p.h.) = Dfl. 288 (US$ 144) per volume.
Our p.p.h. (postage, package and handling) charge includes surface delivery of all issues, except to subscribers in the U.S.A., Canada, Australia, New Zealand, P.R. China, India, Israel, South Africa, Malaysia, Thailand, Singapore, South Korea, Taiwan, Pakistan, Hong Kong, Brazil, Argentina, Mexico, who receive all issues by air delivery (S.A.L. - Surface Air Lifted) at no extra cost. For Japan air delivery requires 25% additional charge; for all other countries airmail and S.A.L. charges are available upon request.
Customers in the U.S.A. and Canada wishing information on this and other Elsevier journals, please contact Journal Information Center, Elsevier Science Publishing Co., Inc., 655 Avenue of the Americas, New York, NY 100 10. Telephone: (212) 989 5800. Fax: (212) 633 3990. Telex: 420–643.
